MODULAR DESIGN

YS SERIES HYDRAULIC ACTUATOR

Weir Concepts YS Series Actuators

- Pneumatic and hydraulic options
- Creative modular design for maximizing efficiency, reducing wear and extending life

Operating Ranges

Torque Outputs (guaranteed)

Double Acting: 12,581-6,000,000 lb.in.

(1420-678,000Nm)

Operating Pressure:

Hydraulic - to 5000 psi (345 Bar)

Operating Temperatures:

Standard: -40°C to 150°C

Optional High / Low - temperatures available

**Solutions for your
company needs**

Weir Concepts at work for you

Compact Wear Resistant Corrosion Resistant

The WC YS Series actuators optimize the center of gravity, being significantly lighter and smaller than other actuators with equal or greater torque output—approximately 1/3 lighter and 1/3 smaller

The wear resistant piston rod and guide block connection along with superior surface finishes and self-lubricating bearings maximize the direct transfer of input energy to valve stem. Efficiency is further enhanced by the tension-loaded spring which minimizes radial loads on the piston rod.

Featuring protective internal and external coatings, the WC YS Series is a reliable product in harsh environments.

WEIR CONCEPTS OFFERS TECHNICAL CONSULTING AND PROVIDES A TOTAL END TO END SOLUTION.

YS SERIES HYDRAULIC ACTUATOR - DESIGN FEATURES & CONSTRUCTION - OFFER UNIQUE BENEFITS

BODY

1. Internal O-rings to ensure water ingress protection.
2. NAMUR standard for all sizes for assembly of switch boxes and positioners.
3. Threaded parts in front and the back side of the body for easy assembly of a control panel.

4. Round roller is used, reducing the friction between the yoke arm and pin, minimizing the wear.

5. Replaceable bearings protect the sliding and rotating components, suitable for either dry or lubricated working conditions.

6. PTFE thrust bar prevents yoke pin axial movement, transferring axial loads directly to the drive module case.

7. Connects the piston rod with the guide block, compensating for side load deflection and reducing wear on rod, bearings and seals.

INTERNAL BODY PARTS

8. The inner surface of cylinder is coated by PTFE, to prevent resistance and self-lubricating.

9. Piston seals, double sealing, with O-ring and dynamic ring to prevent metal to metal contact between the piston and the cylinder.

CYLINDER

10. Spring module - safe spring lock, prevents spring module detachment from the drive module.

11. Spring module - internal hydraulic cylinder for manual pump override.
